

Technical Data Sheet F-2000 Series - Digital Paddlewheel Flow Sensor

F-2000 Features:

- TTL/CMOS compatible, current sinking Hall Effect output signal. Optional AC sine wave output sensor available.
- One mile signal range without boosters.
- NEMA 4X rated.

F-2000 Specifications:

MOLDED IN-LINE M/NPT

Max. Fluid Temperature 200° F (93° C) @ 0 PSI (Polypropylene in-line, PVDF saddle, 316SS Tee) 140° F (60° C) @ 0 PSI (PVC saddle and Tee fittings)

Note: Temperature rating of sensor only. Actual pipe rating may vary.

Power requirements...... 6-24 VDC, AC/DC transformer sold separately.

Full scale accuracy +/- 1% Sensor/Paddle/Axle material . PVDF O-ring seals: Viton Approximate shipping weight. 2 lb. (0.9 kg)

Installation Guidelines F-2000 Series - Digital Paddlewheel Flow Sensor

Fluid Flow Stream Requirements

Measuring accuracy requires a fully developed turbulent flow profile. Pulsating, swirling and other disruptions in the flow stream will effect accuracy. Flow conditions with a Reynolds Number greater than 4000 will result in a fully developed turbulent flow. A Reynolds Number less than 2000 is laminar flow and may result in inaccurate readings.

Minimum Straight Pipe Length Requirements

The sensor's accuracy is affected by disturbances such as pumps, elbows, tees, valves, etc., in the flow stream. Install the sensor in a straight run of pipe **as far as possible** from any disturbances. The distance required for accuracy will depend on the type of disturbance.

Type Of Disturbance	Minimum Inlet Pipe Length	Minimum Outlet Pipe Length	
Flange	10 X Pipe Inside Diameter	5 X Pipe Inside Diameter	
Reducer	15 X Pipe Inside Diameter	5 X Pipe Inside Diameter	
90° Elbow	20 X Pipe Inside Diameter	5 X Pipe Inside Diameter	
Two 90° Elbows -1 Direction	25 X Pipe Inside Diameter	5 X Pipe Inside Diameter	
Two 90° Elbows -2 Directions	40 X Pipe Inside Diameter	5 X Pipe Inside Diameter	
Pump Or Gate Valves	50 X Pipe Inside Diameter	5 X Pipe Inside Diameter	

Mounting location and pressure/temperature requirements

- The sensor is designed to withstand outdoor conditions. A cool, dry location, where the unit can be easily serviced is recommended.
- The sensor can be mounted on horizontal or vertical runs of pipe. Mounting at the vertical (twelve o'clock) position on horizontal pipe is recommended. Mounting anywhere around the diameter of vertical pipe is acceptable, however, the pipe must be completely full of water at all times. Back pressure is essential on downward flows. See the minimum straight length of pipe requirement chart above.
- The sensor can accurately measure flow from either direction.

STATIC PRESSURE PSI (BAR)
